

Floreant

Scale: N Gauge

Area being modelled: N/A

Period being modelled: Any

Description of the layout

The layout consists of a simple track plan – 4 loops and some sidings – ideal to watch the trains go by. Also included are several buildings from a variety of manufacturers. It has both DC (Inner loops) and DCC operation (outer loops and sidings).

The N gauge team decided to refurbish the donated layout as a good way of developing skills and techniques. Doing this also offered the chance for training other club members and to experiment with different control technologies and to demonstrate what could be done in a small space at home by anyone. Points are now controlled by a mix of solenoids and wire in tube.

Build status: Scenic areas in construction.

Size: 141cm x 94cm. Plus one table for stock boxes etc.

Number of operators: 2. Operated from the front.

Availability for external exhibitions: It is only anticipated to exhibit this layout at HGDMRS exhibitions and open days.
